LibraTM

Wearable Independence

Balance Tracking

Libra tracks balance when you stand, sit, and walk.

Walking Analytics

Libra uses Big Data to understand your gait and improve your mobility.

Works On Any Device

We've built Libra to work on the web, email, through iPhone, and on Android.

At **Embrace HealthWear**, our mission is to **empower** individuals with mobility impairments by making physical therapy evaluations **accessible** from the comfort of home. Based on your gait activity, **LibraTM predicts and prevents falling injuries** months before they happen, and informs you about **personalized exercises** you can do to improve your **stability** and **strength**.

This wearable saves lives.
